OUR TEAM

ABOUT US

OUR PHILOSOPHY

Humble in front of mountains, aware of its beauty and its dangers, we are among those who focus our attention on preserving it rather than conquering it.

OUR REASON OF BEING

We are passionate mountaineers, climbers and skiers. We love the transparency of the ice, the purity of the rock and the silence peaks.

We are humble in front of mountains, and take a fresh look at them, closer to the material and to those who focus their attention on preserving it rather than conquering it.

We are aware of its beauty and its dangers.

We believe the fun is in the accomplishment. It is from below, where we work, at the foot of Mont Blanc and the Rockies, that we scan the peaks that inspire us to design the best products on the market.

We aspire to become the benchmark brand for mountaineering by offering the products our community is looking for.

We are a brand that cares about the environment, its customers, and the details of its products.

We are bold, creative and responsible.

We get to the point with a subtle blend of purism and daring.

OUR CORPORATE & SOCIAL RESPONSIBILITY

At BLUE ICE, we see ourselves as part of a global community and ecosystem.

We have a responsibility to ourselves, our customers and our business partners to constantly improve our environmental and social impact. We believe it is both a moral and a business imperative that the highest priority of our business is to return a positive long-term value to our stakeholders and the planet.

As such, we are committed to the following actions:

FACILITY & ORGANIZATION

- Passive conception of our head office
- 100% renewable energy supply
- Recycling/reusing of office waste
- Carpooling and bicycle commuting
- Composting all our organic waste
- Using biodegradable cleaning products

PRODUCT & SUPPLY CHAIN

- Locally-sourced raw materials when available
- Local production when possible
- Recycled/upcycled/reused raw materials
- Partnering with responsible vendors
- Long-lifecycle product design
- Resource-efficient shipping and receiving methods

ADVOCACY & PARTNERSHIPS

- Contributing business member of 1% for the Planet
- Contributions and sponsorships of local and regional access and advocacy groups
- Partnering with retailers and organizations with similar ethos
- Partnering with mountain associations and mountain guiding companies with similar values

CRAMPONS

HARFANG ENDURO

NEW

**Our most durable;
compact and adaptable
crampon ever built for
ski mountaineering and
mountaineering.**

Materials: UHMWPE and HTPE
40mm center strap, ChroMoly steel
Certification: CE EN 893, UIAA 153

The Harfang Enduro crampons have a chromoly steel front, secondary, and rear rail. Giving you harmony between durability, packability, and weight. This patented concept is based on a central main textile strap that connects the front, secondary, and back rails. This system allows the user to mount it in the most suitable position base on the application or the geometry of the boots. The main strap flexible linking system minimizes bulk and offers a real compactness. The Harfang Enduro is designed to fit any boot with a heel welt and includes front bail systems: fully auto and semi-auto which are easily interchangeable. Durability packability and weight.

HARFANG TOUR

The superlight take on the most compact and adaptable crampon ever built for race, ski touring, and ski mountaineering.

Materials: UHMWPE and HTPE
40mm center strap, Aluminum
Certification: CE EN 893, UIAA 153

The Harfang Tour crampon has an aluminum front, secondary, and rear rail. This is the go to crampon when light and fast are the best choice. The middle rail can be fully removed to give you the an even lighter setup for racing. This patented concept is based on a central main textile strap that connects the front and back rail and allow to mount it in the most suitable position base on the application or the geometry of the boots. The main strap flexible linking system minimizes bulk and offers a real compactness.

The Harfang Tour is designed to fit any boot with a heel welt and includes two front bail systems: fully auto and semi-auto which are easily interchangeable.

HARFANG

The most compact and adaptable crampon ever made for ski touring and ski mountaineering.

Materials: UHMWPE and HTPE
40mm center strap, Chromoly steel, Aluminum

Certification: CE EN 893, UIAA 153

The Harfang crampons have a chromoly steel front rail and aluminum secondary and rear rail, offering an excellent balance between performance, technicality weight, and traction on ice. This patented concept is based on a central main textile strap that connects the front and back rail and allow to mount it in the most suitable position base on the application or the geometry of the boots. The main strap flexible linking system minimizes bulk and offers a real compactness. Designed with a fully automatic binding system it fits all size ski and ski touring boots featuring a toe welt, as well as mountaineering boots with a rigid sole and toe welt. Include wire toe bail for full automatic attachment and compact toe basket for semi-auto mounting.

ICE SCREWS

AERO

The lightest weight steel screw on the market with an innovative 3-tooth tip design and largest diameter, ideal for ice climbing and technical mountaineering.

Materials: Chromoly Steel, Aluminum

Certification: CE EN 568, UIAA 151

The Aero is innovative thanks to its 3-tooth tip design which gives the best quick and easy screwing. Its thin wall design reduces the weight considerably, the steel tip and tube maintains high durability of the threads. Its largest diameter body allows to use securely existing holes when there is no other option. Colors-coding easily indicates the length of the screw. Its features and design make it the ideal ice screw for the most technical routes where performance, durability, and lightness are the key.

AERO LITE

The lightest weight ice screw on the market with an innovative 3-tooth tip design, ideal for technical mountaineering.

Materials: Aluminum, Stainless steel
Certification: CE EN 568, UIAA 151

The Aero lite uses a stainless steel, 3 tooth tip which allows for easy placement in all conditions. The aluminum body and hanger minimize weight, while the large outer diameter allows for secure placements when using existing holes.

Color-coding easily indicates the length of the screw.

Its features and design make it the ideal ice screw for the most technical routes where lightness and performance are the key.

ICE AXES

FALK

Light and compact
for ski touring and ski
mountaineering.

Materials: Chromoly Steel,
Aluminum, Impact-modified Nylon
Certification: CE/EN 13089, UIAA

The Falk is a great entry-level ice axe for ski mountaineers or classic touring skiers. Built with the same characteristics as our Hummingbird, the Falk offers a very good price / performance ratio. Its head is designed in chromoly steel which guarantees it an effective anchoring and its aluminum handle ensures lightness and strength. It is the ideal tool for novice skiers and mountaineers looking for a technical and lightweight ice axe.

Pick and adze protector included.

AKILA

Lightweight, functional, and durable technical piolet for alpinists or the steep skiing enthusiasts.

Materials: Chromoly Steel, Stainless Steel, Aluminium, Impact-modified Nylon
Certifications: CE/EN 13089, UIAA 152

The Akila is the first Type 1 ice axe to achieve such high level of technicality in the ultralight category. The shape of its chromoly steel ergonomic head is studied for optimal anchoring regardless of the surface. The Akila is quite short, ultralight and compact to be easily stored inside a backpack. It is the ideal tool for hard use and is offered in both a hammer and adze. Protectors included.

HUMMINGBIRD

Ultralight and technical ice axe for high-alpine skiing, officially approved for ski mountaineering competitions.

Materials: Titanium, aluminum, impact-modified nylon

Certification: Certifications: CE/EN 13089, UIAA

The Hummingbird is one of the lightest, fastest, toughest ski mountaineering piolets on the market. Its titanium head is as light as aluminum but as solid as steel. Its aluminum shaft promises extreme lightness and solidity. Pick and adze protector included.

BLUEBIRD

Classic, resistant and all-purpose mountaineering ice axe with very good anchoring qualities.

Materials: Stainless steel, aluminum, impact-modified nylon

Certifications: CE/EN 13089, UIAA

The Bluebird ice axe is the most versatile and robust in our range, designed for steep snow or ice slopes. Its 356g intended for the practice of classic alpinism offer very good anchoring qualities. The tip and head of the axe are made of hot-forged stainless steel material that offers ultra high durability and corrosion resistance even with the most intense use.

Pommel and protectors included.

HARNESSES

W'S CUESTA

NEW

The feminine version of our all-around 3 season rock-climbing harness, ideal for trad climbing, sport climbing or long multi-pitch routes.

Materials: High tenacity PES, UHMW polyethylene, aircraft grade aluminum speed buckle, acetal buckles
Certifications: CE EN 12277, UIAA 105

The W's Cuesta has been specifically designed to meet women's fit requirements. It is a multipurpose rock-climbing harness dedicated to confirmed and committed climbers. The sleek, slim design with laminated waist belt and elasticized leg loops offers complete freedom of movement with a minimal weight (285g). The lightweight body fabric and the tie-in points made out of high tenacity nylon improves resistance and durability of the harness. It has four gear loops: 2 front, with rigid insert for ease of clipping and 2 back, flush for backpack compatibility. It is the harness to carry everywhere you go.

Helmet holder included

With its 45-liter volume, the Octopus is a minimalist and versatile climbing pack. It offers an easy access thanks to its large opening in the back. Its high tenacity Nylon fabric material with foam lining makes it extremely resistant to wear and friction. For optimal comfort, it includes a back panel and ergonomic straps. Ideal for all your climbing trips, it is airline overhead bin compatible.

DRAGONFLY SUSPENSION: AEROLIGHT™

The Dragonfly suspensions are the lightest suspensions from Blue Ice. Designed specifically for the elite alpinist, they feature harnesses cut specifically for climbing mobility without sacrificing comfort. Removable waistbelts give the climber options for stability, load transfer, and dexterity. The 3D air mesh back panel ensures comfort and breathability.

DRAGONFLY 18L

Ultralight pack for fast alpine missions or day hikes

With its 372 grams, the Dragonfly 18L has an unrivalled power-to-weight ratio. Minimalist, ultralight and comfortable, make this pack ideal for multi-pitch missions. Very compact, you can stuff it in its zipped front pocket. The chest strap and belt are fully removable.

ROC

Reference book on the practice of rock climbing by Jérôme Blanc-Gras and Manu Ibarra, Blue Ice technical advisers.

ROC, Éditions du Mont-Blanc

STYLE: 100321

FRENCH

ROC tackles all forms of rock climbing away from sanitized terrain, from large alpine routes to modern “trad” lines while covering history, playgrounds, equipment and techniques.

A book to acquire in-depth knowledge of culture, approach and safety. ROC is for all fans of verticality and adventure, both amateurs and professionals, occasional practitioners or instructors.

ICE BOOK

Required reading for all ice climbers and alpinists.

Soft cover with flaps
264 color pages

STYLE: B002

995 G

210 X 265 MM

FRENCH

ENGLISH
(only available in North America)

Everyone who has ever swung an ice tool, or wanted to learn, has something to gain from this excellent book.

Much more than your basic instructional manual, it presents an in-depth look at the sport of ice climbing, from the earliest alpine ascents to modern drytooling. There is a wealth of information on climbing techniques, equipment, history, and even the science of ice itself. All ice climbers should pay close attention to the authors' innovative “Check and Go” risk reduction method, and

their detailed analysis of the different types of ice formations. Numerous photos, charts, and diagrams illustrate the text, and there are personal accounts written by top ice climbers and alpinists. Suitable for ice climbers of all abilities, as well as guides, instructors, and alpine clubs. Foreword of the English version by Jeff Lowe.

TECHNOLOGIES

To produce the best gear possible, we only use the most durable fabrics and finest technologies, with the highest quality standards, including the following:

CORDURA®

Stylish durability and exceptional strength-to-weight ratio. Exceptionally resistant to tears, scuffs and abrasions. Long-lasting durability.

HIGH TENACITY RIPSTOP NYLON 66

Reinforced nylon making it extra resistant to tearing and ripping, thanks to reinforcement threads in a crosshatch pattern. Woven with coarse, strong warp and filling yarns at intervals so that tears will not spread.

PU COATING

Waterproofing polyurethane (PU) coating or lamination applied on nylon fabric. The PU coating is applied to a single side of the base fabric, thus making it water resistant, light weight, flexible and more resistant to wear-and-tear.

DWR COATING

Durable water repellent (DWR) is a coating added to fabrics to make them water-resistant.

UHMW POLYETHYLENE

Super-strong fiber offering maximum strength combined with minimum weight and incredible softness. 15 times stronger than steel (weight to weight). Resistant to moisture, UV, chemicals.

7075-T6 ALUMINUM

Also called "aircraft grade" aluminum, often referred to as the strongest aluminum grade. Alloy 7075 has the strength of many steels, while retaining aluminum's lightweight qualities.

STAINLESS STEEL

Stainless steel's resistance to corrosion and staining, low maintenance, and familiar lustre make it an ideal material for many applications where both the strength of steel and corrosion resistance are required.

TITANIUM

Titanium combine qualities of both steel and aluminum : Resistant to corrosion, it is recognized for its high strength-to-weight ratio. As strong as steel, titanium is 60% denser than aluminium, but more than twice as strong.
